FOR THE PROFESSIONAL GROWER

Pansies by Syngenta Flowers: A Variety for Every Space

By Heidi Doering, Technical Services Manager, Syngenta Flowers

garden space. From eye-catching drive-by landscapes to close-up patio and deck planters, we provide a pansy for every use.

Mammoth™ and Colossus™

Mammoth and Colossus pansies are just that: Huge flowered pansies with maximum impact. They're bred to take the heat and flower through the stresses of summer production. They feature huge blooms that span 3 to 4 inches across over robust, stress-resilient plants. With 11 colors and two mixes, the more vigorous Mammoth series boasts the colors growers need to supply landscapers and consumers with maximum impact. The Colossus series, with 15 colors and two mixes, features a non-stretching habit and fast-filling plants to reduce the risk of summertime stretch.

Delta™ and Karma™

Delta is the number-one selling series in the world. With large flowers over robust plants, it is perfectly suited to production for any season. With 32 colors and 20 mixes in the series, growers, retailers and consumers find the right color for every selling and

planting season within the Delta series. Delta Premium varieties feature a non-stretching habit, simplifying production and increasing profit potential at every production turn. Karma offers varieties with more size at finish for growers who require more vigorous plants.

Mariposa™ and Sky™

Landscapers and gardeners looking for sheer flower volume and best-in-class overwinter landscape performance in cooler/colder regions find Mariposa and Sky pansies a perfect choice. The medium-sized flowers recover quickly from adverse weather. When placed in early autumn landscapes, Mariposa and Sky develop strong root systems that come through winter like true champions.

Syngenta Flowers' pansies prove that quality does matter, with more landscapers and gardeners choosing Delta than any other pansy series in the world. Southern growers have made Colossus pansies the landscape plant of choice for early-season, late-summer plantings in high-stress southern climates.
